

ABOUT ME

As a self-taught and highly motivated Junior Web Developer, I bring over two years of experience in crafting responsive and user-friendly websites and web applications. My journey into web development, while maintaining full-time employment in a non-IT field, showcases my dedication and adaptability. My technical proficiency encompasses HTML, CSS, JavaScript, along with mastery in Firebase, Tailwind CSS, and Bootstrap. I am actively expanding my expertise by learning React to enhance my front-end development capabilities. My educational achievements include completing the Front-End Developer Career Path at Scrimba, during which I developed several independent projects. Noteworthy among these is a multilingual portfolio and a gamified productivity web app, Donezy, which is in progress. I am adept at leveraging AI tools such as GitHub Copilot and ChatGPT to increase development efficiency and elevate code quality. I am currently seeking remote or hybrid employment opportunities within Switzerland or at an international level, eager to bring my unique skill set to a dynamic team.
